

🎯 Task Instruction and Inputs

Transform the input photo into a high-quality, stylized version by preserving the original layout and shapes, enhancing facial details, and harmonizing the final colors back.

Our Methodology

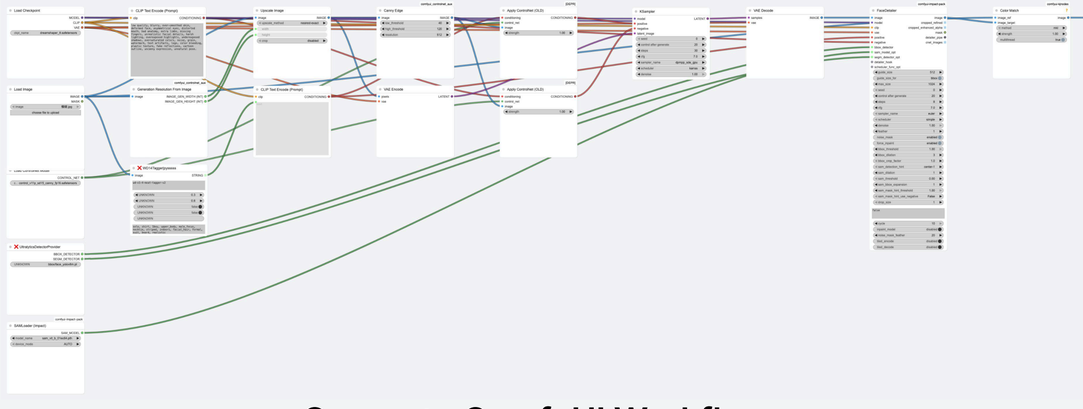

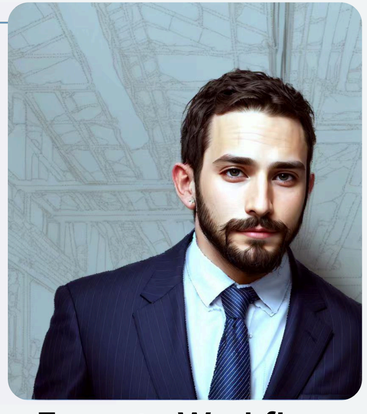

The Proposed Agent

... start by resizing the input and extracting a Canny edge map to serve as a structural anchor ... derive a prompt and encode it with CLIP for positive conditioning, pairing it with a negative one ... load a diffusion model ... fuse ControlNet with the positive conditioning ... run the sampler, decode to RGB, and apply a face detailer that detects faces, segments masks, and performs localized inpainting ... color-match to the original ...
